# Motofog MF20SD

Portable and Powerful Dust Suppression

The latest Motofog MF20SD dust suppression unit is a compact, portable system and comes with a powerful and reliable Yanmar diesel engine. It just requires connection to a 3/4" water supply to throw water 25 metres.

The new upgrade includes a foldable mast with 270° oscillation and optional remote control. It also has new fork lift pockets for ease of movement around site and in and out of vans or storage.

Because the MF20SD only requires connection to a 3/4" water hose, it makes it a very simple and easy to use dust suppression system for use on domestic or commercial demolition sites.
